1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the first and second pulse generation circuits and their location as set forth in claim 16 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet"

pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. Claims 3-11,23,25 are objected to because of the following informalities:

Claim 3 can not be examined since it does not end with "." and it seems to be incomplete. Therefore, the scope of claim can be determined from the language of the claim. The same applies to dependent claims 4-11.

In claims 23,25, the phrase "a functional part.... Function" is not clearly understood. It is unclear as to what it refers to; It is not clearly defined.

Appropriate correction is required.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2,12-13,23-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Honkura et al. (6,831,457).

As to claims 1,12,23, Honkura discloses a magnetic impedance sensor with a square IC chip 70, with two MI elements 10 and a switching circuit 6 controlled by a pulse signal from signal generator 7. Honkura does not explicitly show a rectangular IC chip and connection electrodes between the IC chip and MI element located near a side of the IC chip. However, Honkura discloses a square IC chip 70 in figure 4. The shape of the IC chip is considered a matter of design selection since the shape of the IC chip does not impact the performance of the IC chip. It is common knowledge in the art to connect IC with other element of the device with electrodes (note col. 4, line 13).

As to claims 2,13,24, the switching circuit 6 can be located near the side to which the MI element is located (note figs. 3-4).

5. Claims 14-22,25-33 are allowed.

6. The following is a statement of reasons for the indication of allowable subject matter: The prior art fails to show an MI sensor configuration as set forth in claim 14.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note PTO-892.
